**Supplementary Figure S2. Volcano plots of differential expression results in LNCaP and BxPC-3 cells following AKT inhibition.** (a) LNCaP cells and (b) BxPC-3 cells. Significantly upregulated genes ( $p_{adj} \leq 0.05$  and  $\log_2\text{FoldChange} \geq 1$ ) are shown in yellow (#ffc926), while significantly downregulated genes are shown in blue (#002060). Gene lists corresponding to these plots are provided in Supplementary Tables S1 and S2, respectively.
