**Supplementary Figure S2. Volcano plots of differential expression analyses.** (a) LNCaP cells and (b) BxPC-3 cells treated with AZD5363. Significantly upregulated genes ( $\text{padj} \leq 0.05$  and  $\text{log2FoldChange} \geq 1$ ) are shown in yellow, and significantly downregulated genes are shown in blue. Complete lists of differentially expressed genes corresponding to these plots are provided in Supplementary Tables S1 and S2.
